# Course Program: Java & Spring REST Services - 40 h (1)

- Basic Git workflow – 1 h
- OOP with Java SE – 5h
- Main Java APIs, Design Patterns – 4 h
- ***Homework 1: Choosing a REST API course project to implement using DDD and Spring – project specification***
- Introduction to Spring & Spring Boot – 1h
- Spring beans configuration and Dependency Injection (DI) – 3h
- ***Homework 2: Configure initial version of your course project using Spring Boot. Implement model classes, in-memory domain repositories and services for the chosen course project***
- Spring AOP and SpEL basics – 1 h
- Creating REST controllers – 5h
- ***Homework 3: Implement REST Controllers for the chosen course project***
- Bean Validation API – 1 h
- Error handling – 1 h
- ***Homework 4: Implement validation and error handling for the chosen course project***

# Course Program: Java & Spring REST Services - 40 h (2)

- Spring Boot & Hexagonal Architecture – 1 h
- Creating repositories with Spring Data JPA and Hibernate – 9 h
- ***Homework 5: Implement DAO (persistence) layer for the chosen course project using Spring Data JPA and MySQL***
- Creating domain services, using Data Transfer Objects (DTOs) and model mapping – 2 h
- ***Homework 6: Implement domain services for the chosen course project***
- Introduction to testing Spring Boot applications and components with JUnit 5 – 2h (optional – if time allows)
- Introduction to Spring Security for REST API using JWT – 2h (optional – if time allows)
- Recap and final course projects presentation and discussion – 2h

# Social Coding using Git

- Version control systems and collaborative coding: **CVS**, **SVN**, **Git**
- Version control system – allows saving the code changes in a structured and manageable way, with ability to recover previous code state (rollback), experiments (branches), and changes synchronization (merge)
- A distinctive feature of Git is that the changes are kept locally in a form of momentary pictures (snapshots), instead of saving the list of changes – allows fast operations.
- Three stages: **Modified** → **Staged** → **Committed**

# Social Coding using Git

# Main Git Commands (1)

- Configuring Git

```
$ git config --global user.name "John Smith"
```

```
$ git config --global user.email jsmith@company.com
```

- Help information for a command

```
$ git help <command_verb>
```

- Creating new repository in an existing directory

```
$ git init
```

- Local cloning of a git repository

```
$ git clone <repository_url> [<local_folder>]
```

## Main Git Commands (2)

- Adding new files – Staging и Commit

```
$ git add *.java
```

```
$ git add README.txt
```

```
$ git commit -m "initial commit of MyProject"
```

- Information about the status of the files in the project

```
$ git status
```

- Showing changes in the files

```
$ git diff
```

- Ignoring files – file **.gitignore**

```
$ cat .gitignore
```

# Main Git Commands (3)

- Removing files

```
$ git rm README.txt
```

```
$ git commit -m "removing README file from project"
```

- Renaming files

```
$ git mv README.txt README
```
